

VACCINIUM

# PINK LEMONADE

The berries of 'Pink Lemonade' offer something grandly unique in edible fruits. White, bell shaped flowers in the spring, are followed by translucent white berries, that mature a luscious, bright pink. Berries ripen mid through late season, and are wonderfully sweet, with a firm, clear texture. The foliage of 'Pink Lemonade' is glossy green and lanceolate, with serrated leaf margins and a smooth textured surface. Hybridized by the USDA-ARS to include both *Vaccinium ashei* and *Vaccinium corymbosum*, 'Pink Lemonade' will produce farther south than many traditional blueberries. Berry color and flavor will attract both gourmet cooks and those seeking a culinary novelty. It is, however, the beauty of the plant, its rosy fruit and vigorous habit, that will earn the respect of gardeners everywhere.

**ZONE:** USDA Zone 5

**HABIT:** Vigorous, upright habit; 5'H x 5'W at ten years

**CUTLURE:** Plant in full sun to partial shade, in acidic, well-drained soil that is rich in organic matter

**FEATURES**
